# APIs for Programmers

1

# Nasa APIs

Nasa's APIs give you access to different types of data about astronomy, space weather, Moon, Mars, and much more

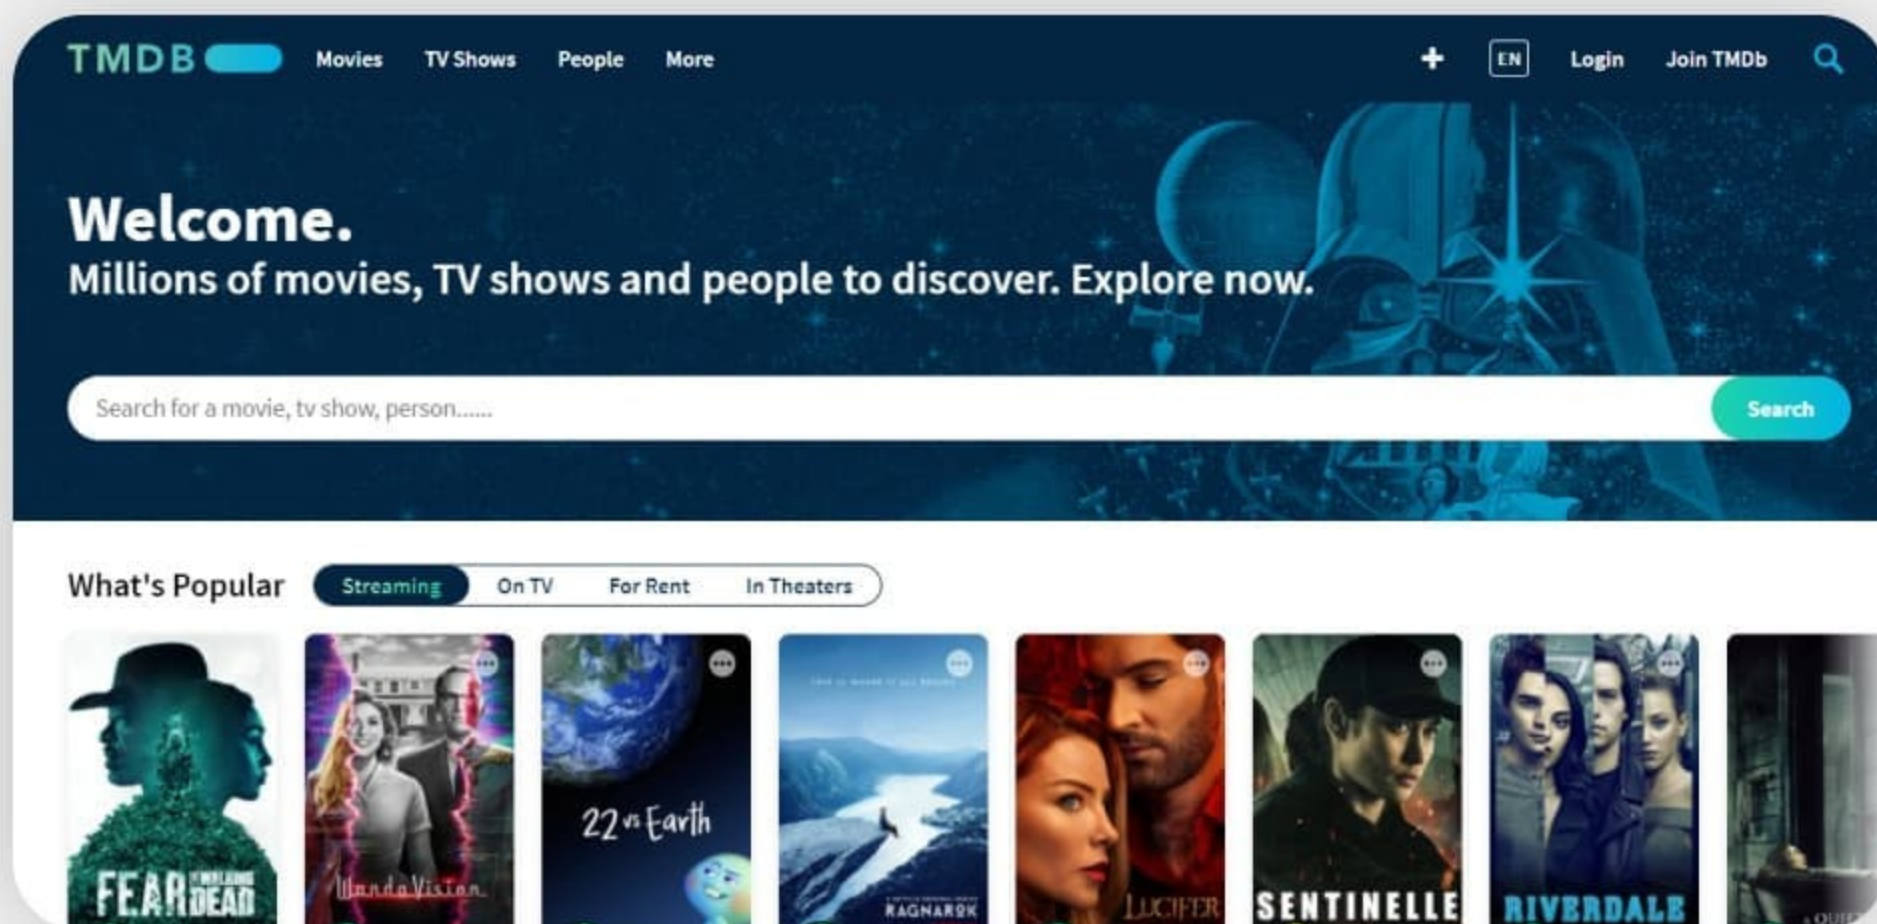

2

# MovieDB API

It's a very useful API that allows you to fetch data about movies, actor images, TV shows, and much more

# Count API

The Count API gives you the ability to create numeric counters and track the number of times a page was visited

**CountAPI**

Counting should be easy, right?

## CountAPI

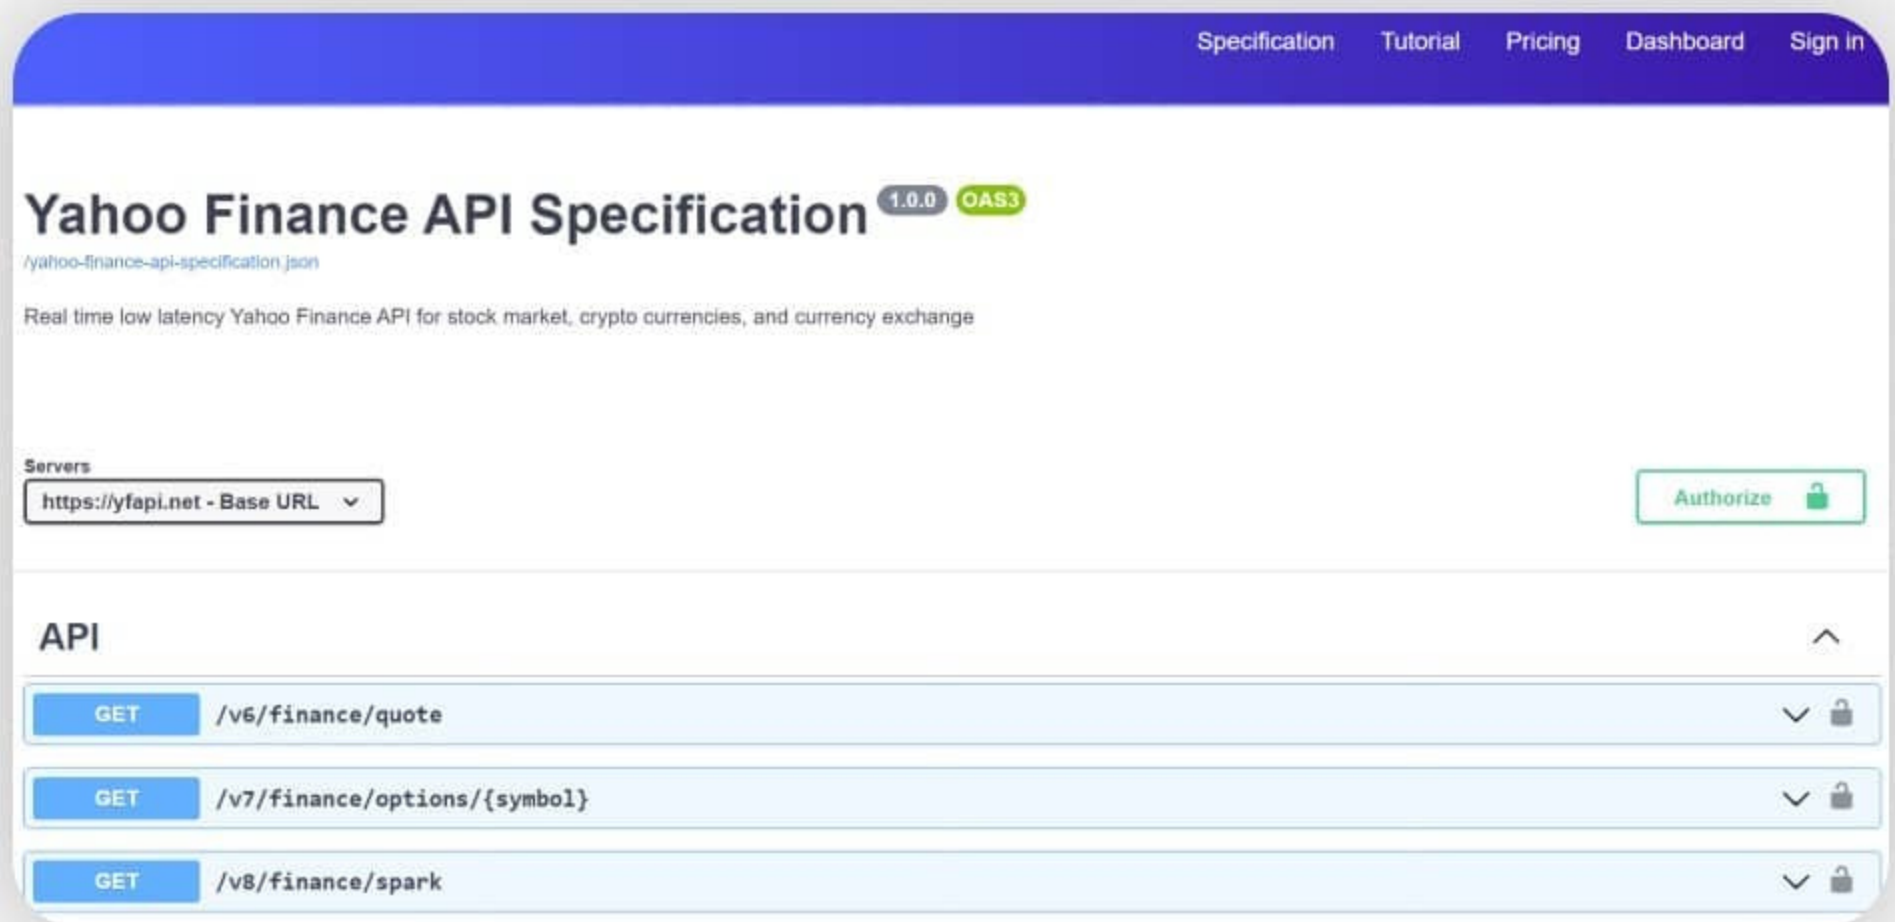

This API allows you to create simple numeric counters. IaaS, Integer as a Service.

It goes down to:

- Create a counter and restrict its operations
- Reset the value of a counter
- Increment/decrement a counter

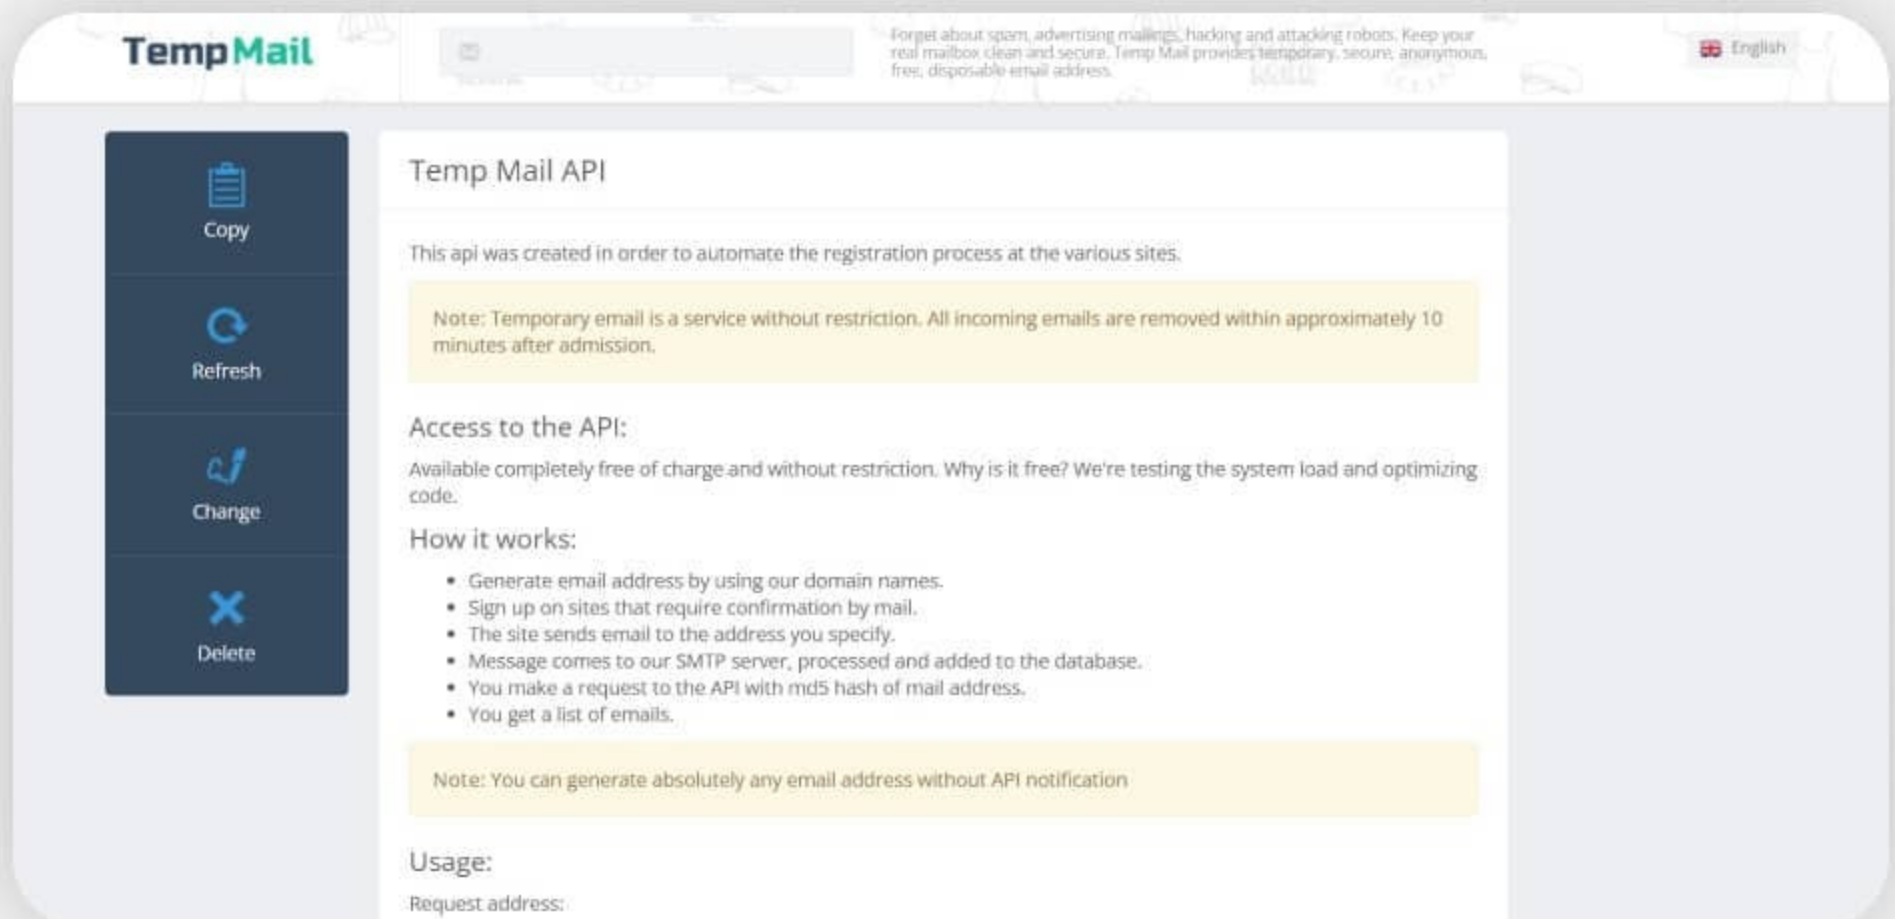

# Yahoo Finance API

This API helps to query financial summary, stocks, quotes, movers, etc... to create a financial site/application such as Yahoo Finance

# TempMail Api

A Disposable Temporary E-mail service which self-destructs after a certain time elapses.

*some few more*

## **Pexels API**

import free images

## **Responsive Voice API**

transform any text into speech

## **Frankfurter**

get currency data and track  
available exchange rates

# let me know what you think!
